| I.   | Basis of the opinion   |  |  |  |  |  |  |
|--|--|--|--|--|--|--|--|
| 1.   | With regard to the elements of the international application:*   |  |  |  |  |  |  |
|  | X the international application as originally filed.   |  |  |  |  |  |  |
|  | the description, pages, as originally filed,   |  |  |  |  |  |  |
|  | pages , filed with the demand,   |  |  |  |  |  |  |
|  | pages, received on with the letter of  |  |  |  |  |  |  |
|  | the claims, pages, as originally filed,  |  |  |  |  |  |  |
|  | pages , as amended under Article 19,   |  |  |  |  |  |  |
|  | o pages, filed with the demand,  |  |  |  |  |  |  |
|  | pages, received on with the letter of  |  |  |  |  |  |  |
|  | the drawings, pages, as originally filed,  |  |  |  |  |  |  |
|  | pages, filed with the demand,  |  |  |  |  |  |  |
| ١.   | pages, received on with the letter of  |  |  |  |  |  |  |
|  | the sequence listing part of the description:  |  |  |  |  |  |  |
|  | pages , as originally filed  |  |  |  |  |  |  |
|  | pages , filed with the demand  |  |  |  |  |  |  |
|  | pages, received on with the letter of  |  |  |  |  |  |  |
| 2. With regard to the language, all the elements marked above were available or furnished to this Authority in the language which the international application was filed, unless otherwise indicated under this item.  These elements were available or furnished to this Authority in the following language which is:  the language of a translation furnished for the purposes of international search (under Rule 23.1(b)). |  |  |  |  |  |  |  |
|  | the language of publication of the international application (under Rule 48.3(b)).   |  |  |  |  |  |  |
|  | the language of the translation furnished for the purposes of international preliminary examination (under Rules 55.2 and/or 55.3).  |  |  |  |  |  |  |
| 3.   | With regard to any nucleotide and/or amino acid sequence disclosed in the international application, the written opinion was drawn on the basis of the sequence listing:                                       |  |  |  |  |  |  |
|  | contained in the international application in printed form.  |  |  |  |  |  |  |
|  | filed together with the international application in computer readable form.   |  |  |  |  |  |  |
|  | furnished subsequently to this Authority in written form.  |  |  |  |  |  |  |
|  | furnished subsequently to this Authority in computer readable form.  |  |  |  |  |  |  |
|  | The statement that the subsequently furnished written sequence listing does not go beyond the disclosure in the international application as filed has been furnished.   |  |  |  |  |  |  |
|  | The statement that the information recorded in computer readable form is identical to the written sequence listing has been furnished.   |  |  |  |  |  |  |
| 4.   | The amendments have resulted in the cancellation of:   |  |  |  |  |  |  |
|  | the description, pages   |  |  |  |  |  |  |
|  | the claims, Nos.   |  |  |  |  |  |  |
|  | the drawings, sheets/fig.  |  |  |  |  |  |  |
| 5.   | This opinion has been established as if (some of) the amendments had not been made, since they have been considered to go beyond the disclosure as filed, as indicated in the Supplemental Box (Rule 70.2(c)). |  |  |  |  |  |  |
| * Re   | eplacement sheets which have been furnished to the receiving Office in response to an invitation under Article 14 are referred to in this nion as "originally filed"   |  |  |  |  |  |  |

#### REASONS

Document 1: This document is about the use of ethimizol [in the form of an ionic salt] to retard changes in neurotransmitter balance [those neurotransmitters being norepinephrine, dopamine and GABA]. This mitigated the impairment of energy formation processes in the brain, particularly when the relevant environmental insult was applied to induce damage. In view of this, this document teaches the promotion of tissue repair or wound healing, particularly with respect to ethimizol in the form of an ionic salt, and especially in the context of traumatic wounds and surgical wounds. Given that in vivo this compound would be in an ionic form, the presentation of ethimizol as a salt is uninventive and as a consequence, this renders claims 1, 3, 5, 7, 11 to 13, 15 not inventive. Furthermore this document would directly suggest that simple structural analogues or counter ion variants of ethimizol would possess analogous/comparable properties, and in view of this, claims 1, 3 to 13, 15, 26, 43, 46, 47, 49 and 50 are not inventive on this further ground.

# Supplemental Box

(To be used when the space in any of the preceding boxes is not sufficient)

## Continuation of Box V

Document 2: This document is about the use of ethimizol [in the form of an ionic salt] to retard changes in antioxidative enzyme activity and levels in neurogenic gastric lesions [those antioxidative enzymes being catalase and superoxide dismutase]. This mitigated the impairment of the parasympathetic nervous system and lipid peroxidation processes, particularly when the relevant environmental insult was applied to induce damage. In view of this, this document teaches the promotion of tissue repair or wound healing, particularly with respect to ethimizol in the form of an ionic salt, and especially in the context of traumatic wounds and surgical wounds. Given that in vivo this compound would be in an ionic form, the presentation of ethimizol as a salt is uninventive and as a consequence, this renders claims 1, 3, 5, 7, 11 to 13, 15 not inventive. Furthermore this document would directly suggest that simple structural analogues or counter ion variants of ethimizol would possess analogous/comparable properties, and in view of this, claims 1, 3 to 13, 15, 26, 43, 46, 47, 49 and 50 are not inventive on this further ground.

Document 3: This document is about the use of ethimizol [in the form of an ionic salt] to mitigate the development of duodenal ulcers. In view of this, this document teaches the promotion of tissue repair or wound healing, particularly with respect to ethimizol in the form of an ionic salt, and especially in the context of traumatic wounds and surgical wounds. Given that in vivo this compound would be in an ionic form, the presentation of ethimizol as a salt is uninventive and as a consequence, this renders claims 1, 3, 5, 7, 11 to 13, 15 not inventive. Furthermore this document would directly suggest that simple structural analogues or counter ion variants of ethimizol would possess analogous/comparable properties, and in view of this, claims 1, 3 to 13, 15, 26, 43, 46, 47, 49 and 50 are not inventive on this further ground.

Document 4: This document is about the use of ethimizol [in the form of an ionic salt] to enhance the reparative processes with respect to neurogenic lesions of the gastric mucosa. This accelerated the healing of and reduced the number of gastric lesions. In view of this, this document teaches the promotion of tissue repair or wound healing, particularly with respect to ethimizol in the form of an ionic salt, and especially in the context of traumatic wounds and surgical wounds. Given that in vivo this compound would be in an ionic form, the presentation of ethimizol as a salt is uninventive and as a consequence, this renders claims 1, 3, 5, 7, 11 to 13, 15 not inventive. Furthermore this document would directly suggest that simple structural analogues or counter ion variants of ethimizol would possess analogous/comparable properties, and in view of this, claims 1, 3 to 13, 15, 26, 43, 46, 47, 49 and 50 are not inventive on this further ground.

Document 5: This document is about the use of ethimizol [in the form of an ionic salt] to enhance the reparative processes with respect to gastric mucosa ulceration. This accelerated the healing of these ulcers. In view of this, this document teaches the promotion of tissue repair or wound healing, particularly with respect to ethimizol in the form of an ionic salt, and especially in the context of traumatic wounds and surgical wounds. Given that in vivo this compound would be in an ionic form, the presentation of ethimizol as a salt is uninventive and as a consequence, this renders claims 1, 3, 5, 7, 11 to 13, 15 not inventive. Furthermore this document would directly suggest that simple structural analogues or counter ion variants of ethimizol would possess analogous/comparable properties, and in view of this, claims 1, 3 to 13, 15, 26, 43, 46, 47, 49 and 50 are not inventive on this further ground.

Document 6: This document is about the use of ethimizol [in the form of an ionic salt] to treat gastric and myocardial damage of neurogenic origin. The salt was also found to be effective in aiding healing from surgery and in patients with ulcers. In view of this, this document teaches the promotion of tissue repair or wound healing, particularly with respect to ethimizol in the form of an ionic salt, and especially in the context of traumatic wounds and surgical wounds. Given that in vivo this compound would be in an ionic form, the presentation of ethimizol as a salt is uninventive and as a consequence, this renders claims 1, 3, 5, 7, 11 to 13, 15 not inventive. Furthermore this document would directly suggest that simple structural analogues or counter ion variants of ethimizol would possess analogous/comparable properties, and in view of this, claims 1, 3 to 13, 15, 26, 43, 46, 47, 49 and 50 are not inventive on this further ground.

International Application No.

<u>Document 7</u>: This document is about the use of ethimizol [in the form of an ionic salt] to promote mitotic activity in both tongue and hepatic tissue where the mitotic activity had been suppressed [by hydrocortisone]. In view of this, this document teaches the promotion of tissue repair or wound healing [including in epithelial tissue, being from the tongue], particularly with respect to ethimizol in the form of an ionic salt, and especially in the context of erosions, ulcers, traumatic wounds and surgical wounds. Given that *in vivo* this compound would be in an ionic form, the presentation of ethimizol as a salt is uninventive and as a consequence, this renders claims 1, 3, 5, 7, 11 to 15 not inventive. Furthermore this document would directly suggest that simple structural analogues or counter ion variants of ethimizol would possess analogous/comparable properties, and in view of this, claims 1, 3 to 15, 26, 43, 45, 46, 49 and 50 are not inventive on this further ground.

<u>Document 8</u>: This document is about the use of ethimizol [in the form of an ionic salt] to accelerate the repair of damaged heart tissue, especially myocardial tissue. In view of this, this document teaches the promotion of tissue repair or wound healing, particularly with respect to ethimizol in the form of an ionic salt, and especially in the context of traumatic wounds and surgical wounds. Given that *in vivo* this compound would be in an ionic form, the presentation of ethimizol as a salt is uninventive and as a consequence, this renders claims 1, 3, 5, 7, 11 to 13, 15 not inventive. Furthermore this document would directly suggest that simple structural analogues or counter ion variants of ethimizol would possess analogous/comparable properties, and in view of this, claims 1, 3 to 13, 15, 26, 43, 46, 49 and 50 are not inventive on this further ground.

<u>Document 9</u>: This document is about the use of ethimizol [in the form of an ionic salt] to promote mitotic activity in both tongue and hepatic tissue where the mitotic activity had been suppressed [by hydrocortisone]. In view of this, this document teaches the promotion of tissue repair or wound healing [including in epithelial tissue, being from the tongue], particularly with respect to ethimizol in the form of an ionic salt, and especially in the context of erosions, ulcers, traumatic wounds and surgical wounds. Given that *in vivo* this compound would be in an ionic form, the presentation of ethimizol as a salt is uninventive and as a consequence, this renders claims 1, 3, 5, 7, 11 to 15 not inventive. Furthermore this document would directly suggest that simple structural analogues or counter ion variants of ethimizol would possess analogous/comparable properties, and in view of this, claims 1, 3 to 15, 26, 43, 45, 46, 49 and 50 are not inventive on this further ground.

Document 10: This document is about the use of ethimizol [in the form of an ionic salt] to retard decreases in creatine phosphate and noradrenaline. In view of this it was found to have therapeutic and prophylactic value for damage/injury to myocardial tissue. In view of this, this document teaches the promotion of tissue repair or wound healing, particularly with respect to ethimizol in the form of an ionic salt, and especially in the context of traumatic wounds and surgical wounds. Given that in vivo this compound would be in an ionic form, the presentation of ethimizol as a salt is uninventive and as a consequence, this renders claims 1, 3, 5, 7, 11 to 13, 15 not inventive. Furthermore this document would directly suggest that simple structural analogues or counter ion variants of ethimizol would possess analogous/comparable properties, and in view of this, claims 1, 3 to 13, 15, 26, 43, 46, 49 and 50 are not inventive on this further ground.

<u>Document 11</u>: This document is about the use of ethimizol [in the form of an ionic salt] to retard changes due to lipidosis in the aortic wall. In view of this, this document teaches the promotion of tissue repair, particularly with respect to ethimizol in the form of an ionic salt. Given that *in vivo* this compound would be in an ionic form, the presentation of ethimizol as a salt is uninventive and as a consequence, this renders claims 1, 3, 5, 7, 11 to 13 not inventive. Furthermore this document would directly suggest that simple structural analogues or counter ion variants of ethimizol would possess analogous/comparable properties, and in view of this, claims 1, 3 to 13, 26, 43, 48 to 50 are not inventive on this further ground.

Document 12: This document is about the use of ethimizol [in the form of an ionic salt] to retard inflammations. In view of this, this document teaches the promotion of tissue repair or wound healing, particularly with respect to ethimizol in the form of an ionic salt. Given that in vivo this compound would be in an ionic form, the presentation of ethimizol as a salt is uninventive and as a consequence, this renders claims 1, 3, 5, 7, 11 to 13, 15 not inventive. Furthermore this document would directly suggest that simple structural analogues or counter ion variants of ethimizol would possess analogous/comparable properties, and in view of this, claims 1, 3 to 13, 15, 26, 43, 46, 49 and 50 are not inventive on this further ground.
